

Curriculum vitae

JIMMY RENTMEESTER · TILBURG, NETHERLANDS

*In e-commerce since 2016, leading a team since 2022,
and my own apps where every product call is mine.*

I'm Lead Product Manager at Coolblue, responsible for the commercial results and the online customer journey of two product categories in the Netherlands, Belgium and Germany. I make decisions based on customer insight and data, and bring the interests of commercial, marketing, purchasing and development together along the way. What I'm good at: prioritising, making agreements with stakeholders and suppliers, and bringing structure when a lot of things depend on each other.

EXPERIENCE

COOLBLUE · 2020 – PRESENT

Lead Product Manager

AUGUST 2022 – PRESENT · GAMING, PRINTERS & OFFICE · NETHERLANDS, BELGIUM, GERMANY

Commercial product management: I'm responsible for the commercial results and the online customer journey of product categories, not for a software product. That includes the vision and strategy of two categories. I turn strategic goals into roadmaps and quarterly milestones, and guide my teams in delivering them. Customer value, commercial impact and feasibility have to stay in balance.

I directly lead nine people: three commercial product managers, three product journey managers and three product editors. I coach them on their work and their development.

- Setting and rolling out vision and roadmaps across several category teams.
- Turning vision and strategy into concrete project plans, prioritised on customer and business value.
- Leading multidisciplinary project teams, with structured alignment, progress tracking and prioritisation.
- Taking projects from concept to delivery on the basis of data and customer insight, and safeguarding the progress and quality of the team's work.
- Using Looker and AI platforms for reporting and process optimisation.

Product Manager, Gaming

2020 – 2022

End-to-end owner of the commercial performance and customer journey of the Gaming category. The big one was the PlayStation 5 in 2020. It was the most wanted product of the year and we had very little stock, so I worked with development, the app team, marketing, customer service and logistics all at the same time. Others built the technology; my part was the coordination.

After that I set up a process so that with every new batch of stock, every team knew exactly what to do and when. That meant less customer contact.

- Driving growth in Gaming and improving customer journeys using behavioural, returns and review data.
- Working closely with cross-functional teams to hit commercial targets.
- Coaching fellow product managers on data, experimentation and the craft.

BIGSPARK B.V. · 2019 – 2020

SEO Specialist

2019 – 2020 · NIJMEGEN

- Improving site performance through strategic SEO work, both technical and editorial.
- Analysing data and shipping changes to grow organic traffic.

COOLBLUE · 2016 – 2019

Online Marketeer, SEO & CRO

2018 – 2019

- Owning the customer journey for Gaming & IT accessories.
- Building optimised landing pages and navigation structures based on customer behaviour.

Product Support Specialist

2017 – 2018

- Analysing NPS, return reasons and customer feedback to drive product improvements.

Product Editor

2016 – 2017

- Content ownership for Virtual Reality and Tablets.
- Contributing to improvements within the content team.

U-APPROACH · 2014 – 2016

Software Research & Concept Development

2014 – 2016 · EINDHOVEN

Developing concepts around Bluetooth beacons for clients including GLOW and VisitBrabant, thinking through the implementation and how visitor interaction could be encouraged.

- Working with design and IT to get those concepts built correctly.
- Researching mobile applications and user behaviour: how people engage with apps or fail to, and what actually shifts that behaviour.

OWN WORK

Outside work I ship my own iOS apps, on my own. AI writes all the code; I don't program myself. I decide the problem, the scope and the priorities, set when something is done, test on real devices and decide what goes live. For that I use the same project structure and documentation for each app.

Four projects are described on the [front page](#). GRID_BREAKER, BabyBeam and WristVault are in the App Store, and Stillwater runs in the browser. For the three apps, the scope, the price, the store listing, the translations and the compliance paperwork were mine to decide.

SKILLS

Strategic product management: vision, roadmap, prioritisation

Data analysis & process optimisation: Looker, funnel analysis, experiments

Stakeholder management: business reviews, cross-functional alignment

Innovation & technology: directing AI agents, App Store releases

Customer experience: NPS, customer journey, returns and review analysis
